

DELIVERY PARTNER INCOME SHIELD

Parametric Income Insurance for Gig Delivery Workers

AI-Powered Trigger	UPI Automatic Payout	IRDAI Sanctioned
--------------------	----------------------	------------------

Policy Reference	AEGIS/DPIS/2025-26
Product Category	Parametric Microinsurance — Group
Coverage Class	Income Indemnification (Parametric)
Regulatory Framework	IRDAI Regulatory Sandbox — Innovative Products
Risk Carrier	Licensed Non-Life Insurer (To be nominated)
Insured Class	Gig Delivery Workers — Quick-Commerce Platforms
Geographic Scope	India — Urban Tier-I and Tier-II Cities
Policy Version	Version 1.0
Document Date	2025

SECTION 11	Risk Pool and Financial Sustainability
SECTION 12	General Conditions and Regulatory Compliance

SECTION 1 — DEFINITIONS AND INTERPRETATION

1.1 In this Policy, unless the context otherwise requires, the following terms shall bear the meanings ascribed to them herein. All defined terms shall be construed consistently throughout this document.

"Insured"	Any individual gig delivery worker who has been duly onboarded, whose eligibility has been verified in accordance with Section 7, and whose Policy coverage is active as evidenced by a valid Policy Schedule and uninterrupted premium standing.
"Earnings Baseline (E_w)"	The rolling four-week average of verified weekly earnings of the Insured, derived from authenticated platform delivery records. The Earnings Baseline shall be computed separately per Platform Payout Cycle and shall be updated weekly.
"H3 Cell"	A hexagonal geographic micro-zone of approximately 0.46 square kilometres, defined using an open-specification geospatial indexing system at resolution level 8. Each H3 Cell constitutes the primary unit of risk assessment, zone state evaluation, and payout eligibility determination under this Policy.
"Zone State"	The operational classification assigned to an H3 Cell at any given evaluation interval, determined by the Parametric Trigger Engine. Zone States shall be one of: NORMAL , SLOW , DANGEROUS , or HALTED , as further defined in Section 4.
"HALTED State"	The Zone State assigned to an H3 Cell wherein cumulative weighted disruption signals breach the Parametric Trigger Threshold, causing all platform order dispatch within that cell to cease. The HALTED State constitutes a Disruption Event for the purposes of this Policy.
"Loss Fraction (L_p)"	A dimensionless coefficient between 0 and 1 representing the composite probability-weighted income loss risk for a given H3 Cell during a given coverage week, as computed by the AI Risk Assessment Engine using authorised internal systems and environmental, civic, and platform signals.
"Coverage Tier (C_t)"	A policy parameter elected by the Insured at enrolment, representing the fraction of the Earnings Baseline covered upon a HALTED State trigger. Coverage Tiers shall be: Basic (0.4) , Standard (0.6) , and Premium (0.8) .
"Disruption Event"	Any qualifying environmental, civic, or platform-declared occurrence that satisfies the parametric threshold conditions specified in Sections 3 and 4, and causes an H3 Cell to enter HALTED State, thereby triggering an automatic payout obligation under this Policy.
"Parametric Trigger"	The predefined, objective, and measurable threshold conditions based on verified third-party data signals that, when breached, automatically activate the payout obligation under this Policy. The Parametric Trigger does not require claim submission, subjective loss assessment, or human validation, except as provided for fraud investigation under Section 9.
"Sachet Risk Value (SRV)"	An intermediate premium computation value representing the affordable base risk rate for the Insured, computed as the product of the Earnings Baseline and the Affordable Risk Fraction ($\alpha = 0.015$), consistent with international microinsurance benchmarks.

"Sustainability Margin (M)"	The aggregate loading applied to the Sachet Risk Value to ensure solvency of the Risk Pool, comprising a fixed base margin (M-base) and a zone-level volatility adjustment (M-zone-volatility), as described in Section 11.
"Platform Payout Cycle"	The disbursement frequency applicable to the Insured's primary delivery platform: daily or weekly. The Platform Payout Cycle governs the normalisation of the Earnings Baseline and the timing of premium deduction mandates.
"UPI AutoPay Mandate"	The standing payment instruction issued by the Insured through the Unified Payments Interface (UPI) e-Mandate facility, authorising weekly premium deduction up to the maximum permissible cap, processed on the designated deduction day as specified in the Policy Schedule.
"Risk Pool"	The aggregated premium fund maintained by the Insurer, from which all payout obligations under this Policy are discharged, subject to solvency requirements prescribed by IRDAI.
"Insurer"	The licensed non-life insurer acting as risk carrier for this Policy, as identified in the Policy Schedule, including its authorised agents and systems acting within defined operational parameters.
"Policy Schedule"	The schedule issued by the Insurer upon formal enrolment, specifying the Insured's name, coverage tier, premium amount, Policy Period, UPI details, and other particulars applicable to the individual Insured. The Policy Schedule forms an integral part of this Policy.

1.2 Words importing the singular shall include the plural and vice versa. Headings are for reference only and shall not affect interpretation.

1.3 References to any statute or regulation shall be construed as references to that statute or regulation as amended, re-enacted, or replaced from time to time.

SECTION 2 — COVERAGE GRANT

2.1 Subject to the terms, conditions, exclusions, and limitations of this Policy, and upon receipt and maintenance of the applicable Premium, the Insurer shall provide parametric income indemnification to the Insured in respect of qualifying Disruption Events occurring within the Insured's primary H3 Cell during the Policy Period.

2.2 This Policy is a parametric insurance contract. The Payout obligation is triggered solely upon breach of predefined Parametric Trigger thresholds as specified in Section 4. The Payout is not conditional upon, and shall not be reduced by reference to, the Insured's actual income loss in any individual instance.

2.3 No claim submission by the Insured is required to activate the Payout obligation. No subjective assessment of loss shall be conducted. No human validation of individual Payout eligibility is required, except in cases where the anomaly detection system flags an account for investigation under Section 9. The Insurer reserves the right to conduct human review and override of automated determinations at its discretion.

2.4 Coverage under this Policy is operative from 00:00 hours on the Policy Commencement Date and shall continue for the duration of the two-month Enrolment Period, provided that the Insured's Premium obligations are maintained without interruption.

2.5 The Policy Plan applicable to all Insureds is the **"Delivery Partner Income Shield"** — a single-plan, tiered-coverage parametric income insurance product. The Coverage Tier elected by the Insured at enrolment shall determine the Covered Events and Payout quantum as specified in Sections 3 and 6. Details of the Insured's elected tier, premium, and coverage particulars shall be set out in the Policy Schedule issued upon enrolment.

2.6 Coverage is portable across the Insured's primary H3 Cell and the six geographically adjacent H3 Cells (first-order neighbours), subject to verified GPS presence history in those cells as determined by authorised internal systems.

SECTION 3 — INSURED EVENTS AND DISRUPTION CATEGORIES

3.1 A Disruption Event shall be recognised under this Policy only if:

3.1.1 It falls within a Covered Event category corresponding to the Insured's elected Coverage Tier as set forth in Schedule A;

3.1.2 It satisfies the Parametric Trigger thresholds specified in Section 4 for the relevant event type;

3.1.3 It is confirmed by at least two independent authorised data sources as specified in Section 4.3; and

3.1.4 It results in the Insured's primary H3 Cell entering HALTED State.

3.2 Covered Event categories and their tier eligibility are as follows:

Event Type	Trigger Threshold	Basic	Standard
Heavy Rainfall	>60 mm per 3-hour interval (IMD)	✓	✓
Zone Inundation / Flood	Flood advisory issued by IMD/NDMA for H3 Cell	✓	✓
Extreme Heat / Heatwave	IMD Heatwave declaration for zone	✓	✓
Hazardous Air Quality	AQI (PM2.5) >300 (CPCB/OpenAQ)	—	✓
Severe Air Quality	AQI (PM2.5) 200–300 (CPCB/OpenAQ)	—	✓
Civic Bandh / Strike	NDMA/state authority declaration for zone	—	—
Local Protest / Curfew	Government curfew order for H3 Cell area	—	—

Platform Zone Halt	Platform API zone status: HALTED	—	—
--------------------	----------------------------------	---	---

3.3 The following events are explicitly excluded from coverage under all tiers and shall not constitute Disruption Events:

- 3.3.1** Vehicle breakdown, mechanical failure, or fuel unavailability;
- 3.3.2** Platform-initiated cancellations arising from rider conduct or ratings;
- 3.3.3** Personal illness, injury, or incapacity of the Insured;
- 3.3.4** Device damage or connectivity failure attributable to the Insured's equipment; and
- 3.3.5** Any event not independently verifiable through authorised data sources.

SECTION 4 — PARAMETRIC TRIGGER MECHANISM

4.1 Zone State Classification. Each H3 Cell shall be assigned one of the following operational Zone States, evaluated by the Parametric Trigger Engine periodically at defined operational intervals:

Zone State	Description	Payout Status
NORMAL	No disruption signals above baseline. Full platform operations active.	No payout
SLOW	One or more environmental signals approaching threshold. Operations partially constrained.	No payout
DANGEROUS	Multiple signals approaching HALTED threshold. Platform operations significantly reduced.	No payout
HALTED	Parametric Trigger Threshold breached. All order dispatch suspended for H3 Cell.	Payout triggered

4.2 Parametric Trigger Threshold. An H3 Cell shall enter HALTED State upon satisfaction of the following conditions, as confirmed by the Parametric Trigger Engine:

- 4.2.1 For **Heavy Rainfall** events: sustained rainfall intensity exceeding 60 millimetres per three-hour rolling average, as reported by IMD for the geographic coordinates of the H3 Cell centroid;
- 4.2.2 For **Flood** events: issuance of a flood advisory or inundation alert by IMD or NDMA specifically referencing the H3 Cell or its encompassing administrative boundary;
- 4.2.3 For **Extreme Heat** events: IMD declaration of Heatwave conditions for the zone, consistent with IMD's official heatwave criteria;
- 4.2.4 For **Air Quality** events: PM2.5 AQI index exceeding 200 (Standard tier) or 300 (Premium tier), simultaneously reported by at least two CPCB monitoring stations within or proximate to the H3 Cell;
- 4.2.5 For **Civic** events: official declaration of bandh, curfew, or general strike by a competent government authority, confirmed by NDMA and corroborated by authorised traffic data indicating signal cessation; and
- 4.2.6 For **Platform-Declared Halts** (Premium tier only): platform API returning zone operational status of HALTED for the Insured's primary H3 Cell.

4.3 Multi-Source Validation. Entry into HALTED State shall require confirmation from a minimum of two independent authorised data sources as specified in Schedule B. In the event of conflict between data sources:

- 4.3.1 The more conservative (lower-risk) reading shall prevail for the purpose of Trigger evaluation;
- 4.3.2 The Parametric Trigger Engine shall log the conflict and escalate to the Data Governance System for reconciliation; and
- 4.3.3 No Payout shall be withheld solely on account of inter-source discrepancy where the primary source threshold is satisfied.

4.4 Zone Recovery Protocol. Upon cessation of triggering conditions, an H3 Cell shall transition from HALTED State through the following staged recovery:

- 4.4.1 **Partial recovery:** zone reopened at 50% operational capacity upon sustained absence of triggering signals; and
- 4.4.2 **Full recovery:** zone returns to NORMAL State after a defined stability period of confirmed normalcy, as determined by the Parametric Trigger Engine.

4.5 Evaluation Frequency. The Parametric Trigger Engine shall evaluate Zone State periodically at defined operational intervals. Zone intelligence data shall be aggregated from authorised data sources at defined intervals. Payout obligations arising from HALTED State are real-time and shall be discharged without manual intervention.

SECTION 5 — PREMIUM CALCULATION

5.1 Premium Formula. The Weekly Premium payable by the Insured shall be calculated as follows:

$$P_r(\text{final}) = E_w \times \alpha \times L_f \times C_t \times (1 + M)$$

E_w	Earnings Baseline (four-week rolling average weekly earnings)
α	Affordable Risk Fraction (0.015)
L_f	Loss Fraction
C_t	Coverage Tier factor
M	Sustainability Margin

5.2 Affordable Risk Fraction (α). The Affordable Risk Fraction shall be set at 0.015, representing 1.5% of the Insured's weekly Earnings Baseline. This rate is consistent with international microinsurance benchmarks applicable to low-income worker income protection products and shall not be varied without regulatory approval.

5.3 Loss Fraction Computation. The Loss Fraction (L_f) shall be computed by the AI Risk Assessment Engine for each H3 Cell on a weekly basis, drawing on environmental, civic, and platform signals, accounting for both the probability of each disruption type and the associated earnings impact, weighted by temporal position within the payout cycle. Correlated disruption types shall be grouped as composite triggers to prevent underestimation of joint occurrence probability.

5.4 Sachet Risk Value (SRV). The intermediate base rate shall be computed as $SRV = E_w \times \alpha$. At $\alpha = 0.015$, a rider earning INR 8,000 per week produces an SRV of INR 120 per week.

5.5 Coverage Tier Factors.

Tier	Coverage Factor (C_t)	Covered Events
Basic	0.4	Environmental: Heavy Rain, Flood, Extreme Heat
Standard	0.6	Basic events + Hazardous and Severe AQI events
Premium	0.8	Standard events + Civic Bandh, Curfew, Platform-Declared Halt

5.6 Premium Floor and Ceiling. Notwithstanding the formula in Clause 5.1:

5.6.1 The Weekly Premium shall not be less than **INR 15 per week** (the "Premium Floor"); and

5.6.2 The Weekly Premium shall not exceed **INR 150 per week** (the "Premium Ceiling"), consistent with the UPI AutoPay e-Mandate regulatory limit.

5.7 Dynamic Coverage Tier Scaling for Part-Time Workers. Where the computed premium falls below the Premium Floor, the Coverage Tier factor shall be automatically scaled upward to ensure the Insured pays the Premium Floor of INR 15 while receiving proportionally higher payout coverage relative to earnings.

5.8 Zone-Level Premium Adjustment. Where the historical disruption frequency of an H3 Cell increases, the Loss Fraction shall rise correspondingly, resulting in a higher computed Premium for all Insureds within that zone. Such adjustment shall be applied at zone level only and shall never constitute a penalty on any individual Insured for events outside their control.

5.9 Premium Collection. Premiums shall be collected weekly via UPI AutoPay e-Mandate. The deduction day shall be Tuesday of each coverage week, aligned with the post-payout liquidity position of the Insured across Platform Payout Cycles.

5.10 Variable Reference Table.

Variable	Represents	Computed As
E_w	Rider's weekly earnings baseline	Rolling 4-week average from verified platform delivery history
α	Affordable Risk Fraction	0.015 (1.5% of weekly earnings)
SRV	Sachet Risk Value — base rate	$E_w \times \alpha$
L_f	Loss fraction — composite zone risk	Computed by AI Risk Assessment Engine from environmental, civic, and platform signals
C_t	Coverage Tier factor	0.4 / 0.6 / 0.8 per elected tier
M-base	Pool sustainability margin	Actuarially calibrated; ruin probability < 1%
M-zone-vol	Zone-level risk adjustment	Rises with disruption frequency; applied at zone level only

SECTION 6 — PAYOUT TERMS AND DISBURSEMENT

6.1 Payout Trigger. The Insurer's obligation to disburse a Payout shall arise automatically and immediately upon the Parametric Trigger Engine confirming that the Insured's primary H3 Cell has entered HALTED State, subject to:

- 6.1.1** The Insured's Policy being in active standing with no outstanding premium obligations;
- 6.1.2** The Disruption Event falling within the Covered Events for the Insured's elected Coverage Tier; and
- 6.1.3** The Insured not having been flagged under Section 9 with a pending fraud investigation.

6.2 Payout Quantum. The Payout amount per HALTED State event shall be calculated as follows:

$$\text{Payout} = E_w \times C_t \times (\text{Duration of HALTED State} \div 168)$$

Duration of HALTED State is measured in hours from confirmed entry to confirmed exit. 168 hours represents one standard coverage week. The Payout is proportional to the duration of income disruption within the coverage period.

6.3 The Payout shall be computed on the basis of the Earnings Baseline and not on any surge-adjusted or variable earnings figure, reflecting the parametric nature of the product and the intent to protect base income against involuntary disruption.

6.4 Payout Disbursement. The Payout shall be disbursed to the Insured's registered UPI ID or bank account within the same settlement cycle as the HALTED State trigger event. No claim form, documentation, or manual approval is required from the Insured for standard disbursement.

6.5 Payout Cap. The aggregate Payout to any single Insured shall not exceed the Insured's weekly Earnings Baseline (E_w) per coverage week, irrespective of the number of HALTED State events within that week.

6.6 Notification. The Insurer shall notify the Insured of each Payout disbursement via the registered mobile number through SMS, WhatsApp, and in-app notification, within five minutes of disbursement initiation.

SECTION 7 — ELIGIBILITY CONDITIONS

7.1 Eligible Persons. Coverage is available to individuals who satisfy all of the following conditions at the time of enrolment:

- 7.1.1** Active gig delivery worker registered with at least one of: Zepto, Blinkit, or Swiggy Instamart;
- 7.1.2** Resident and operating within a designated covered urban geography as specified in Schedule C;
- 7.1.3** Holder of valid Aadhaar and PAN identification documents, as verified through the onboarding process;
- 7.1.4** Possessing a minimum of two weeks of verifiable GPS-based delivery activity within an H3 Cell at the time of enrolment; and
- 7.1.5** Not previously barred from coverage under this Policy on grounds of fraud or misrepresentation.

7.2 Onboarding State Machine. Enrolment shall progress through the following stages:

NOT_STARTED	Enrolment not initiated.
IN_PROGRESS	Enrolment initiated; identity verification underway.
SUBMITTED	All required information and verifications submitted for review.
APPROVED / REJECTED	Final status determination communicated to the applicant.

7.3 Earnings Baseline Verification. The Earnings Baseline shall be derived from authenticated platform delivery records. In the absence of direct API access, the Insurer may use consent-based Account Aggregator framework data or equivalent verified sources. Self-reported earnings shall not be accepted.

7.4 Continuous Eligibility. Eligibility shall be maintained throughout the Policy Period subject to continuous premium payment, absence of fraud findings, and continued delivery activity within the designated H3 Cell. The Insurer reserves the right to suspend coverage pending investigation under Section 9.

SECTION 8 — EXCLUSIONS

8.1 This Policy shall not cover, and no Payout shall be made in respect of, any loss or disruption falling within the categories set out below.

8.2 EVENT EXCLUSIONS — Disruption arising from:

- 8.2.1** Vehicle breakdown, mechanical or electrical failure, puncture, or fuel shortage;
- 8.2.2** Platform-initiated suspension, deactivation, or penalty applied to the Insured's account by reason of conduct, ratings, or policy violation;
- 8.2.3** Personal illness, physical injury, mental incapacity, or voluntary absence from work;
- 8.2.4** Damage to or loss of the Insured's personal device, battery depletion, or loss of internet connectivity;
- 8.2.5** Events that fail to satisfy the Parametric Trigger threshold, irrespective of subjective hardship experienced by the Insured;
- 8.2.6** Events occurring outside the Policy Period or within areas not covered under Schedule C; and
- 8.2.7** Loss attributable to surge bonus reduction or unavailability in the absence of a HALTED State event.

8.3 PERSONAL EXCLUSIONS — Coverage shall be void with respect to any Insured who:

- 8.3.1** Has provided false or materially misleading information during onboarding;
- 8.3.2** Has been found to have manipulated GPS data, device signals, or zone presence records;
- 8.3.3** Has been determined to be a member of a coordinated fraud ring; or
- 8.3.4** Has failed to maintain continuous premium payment.

8.4 SYSTEMIC EXCLUSIONS — This Policy shall not cover losses arising from events that are systemic, national, or catastrophic in nature. The following are explicitly excluded:

- 8.4.1 Force Majeure and Catastrophic Events:** War, invasion, civil war, armed conflict, military action, rebellion, insurrection, or civil unrest of a scale that disrupts operations across multiple cities or regions;
- 8.4.2 Terrorism:** Acts of terrorism as defined under applicable Indian law, including the Unlawful Activities (Prevention) Act;
- 8.4.3 Nuclear, Chemical, and Biological Risks:** Any loss arising from nuclear contamination, radioactive exposure, chemical weapons, or biological agents, whether accidental or deliberate;
- 8.4.4 Large-Scale Natural Disasters:** Nationwide or multi-city natural disasters such as major earthquakes, tsunamis, or widespread floods declared as national calamities by the Government of India or NDMA at a scale that renders zone-level parametric triggers operationally inapplicable. *Note: Localised flooding or inundation affecting an individual H3 Cell remains a covered Disruption Event under Section 3;*
- 8.4.5 Government Lockdowns:** Any mandatory shutdown, containment order, or prohibition on movement imposed by central or state government that prevents all commercial activity across the insured geography for an extended and indeterminate period;
- 8.4.6 Systemic Infrastructure Failure:** Failure of national or regional power grids, telecommunications networks, or internet infrastructure that is not attributable to a qualifying localised Disruption Event;
- 8.4.7 Authorised Data Source Failure:** Extended or permanent failure of authorised data sources such as IMD, CPCB, or NDMA that renders parametric trigger evaluation impossible; and
- 8.4.8 Platform or Technology Failure:** Systemic platform outage, cyberattack, or technological failure of the delivery platform not attributable to a qualifying Disruption Event, or deliberate manipulation of Parametric Trigger data sources by the Insured or any third party acting in concert with the Insured.

DISTINCTION: Localised events affecting individual H3 Cells (e.g., neighbourhood flooding, area-specific curfew) are **covered** under the relevant tier. Systemic events affecting multiple cities, regions, or the nation as a whole are **excluded** under this Section.

SECTION 9 — FRAUD AND MISREPRESENTATION

9.1 Fraud Detection System. The Insurer shall operate a multi-layered Fraud Detection System comprising a rule-based engine, an anomaly detection module, and a supervised classification model. The System shall generate a composite Fraud Risk Score for each Payout event, drawing on GPS integrity signals, device behavioural signals, zone presence history, velocity analysis, and network relationship analysis.

9.2 Risk Score Thresholds and Actions.

Score Range	Classification	Action
0 – 30%	LOW	Payout auto-approved and disbursed without delay.
30 – 70%	MEDIUM	Payout held pending expedited human review by authorised Insurer personnel. Review to be completed within two hours. No genuine Insured shall have their Payout delayed beyond this period solely on account of a MEDIUM classification.
70%+	HIGH	Payout frozen. Formal investigation initiated. Account suspended pending determination. The Insured shall be notified and afforded the opportunity to appeal under Clause 9.5.

9.3 Detection Signals. The Fraud Detection System shall evaluate the following signals, among others:

9.3.1 GPS Integrity: Comparison of GPS coordinates against cell tower data; assessment of drift, acceleration, and static anomalies inconsistent with outdoor delivery activity;

9.3.2 Device Integrity: Evaluation of accelerometer data, battery drain patterns, and network coherence for consistency with legitimate outdoor mobile device usage;

9.3.3 Zone Presence History: Verification that the Insured's GPS-verified delivery history includes qualifying presence in the claimed H3 Cell prior to the HALTED State event;

9.3.4 Velocity Analysis: Detection of geographically impossible inter-ping distances based on verified timestamps; and

9.3.5 Network Relationship Analysis: Detection of shared device fingerprints, correlated registration timing, and common payout beneficiaries indicative of coordinated fraud rings.

9.4 Consequences of Fraud. Where the Insurer determines, following investigation, that an Insured has committed or attempted to commit fraud:

9.4.1 All pending and future Payout obligations to that Insured shall be permanently voided;

9.4.2 The Insured's Policy shall be cancelled without refund of Premium;

9.4.3 The Insured's Aadhaar and PAN identifiers shall be flagged within the Insurer's systems, disqualifying re-enrolment; and

9.4.4 The Insurer reserves the right to report confirmed fraud to the relevant authorities and to initiate recovery proceedings.

9.5 Fraud Appeal Mechanism. An Insured whose account has been suspended or Payout withheld on grounds of a HIGH Fraud Risk Score classification shall have the right to appeal. The appeal process shall proceed as follows:

9.5.1 The Insured shall submit a written appeal to the Insurer's Grievance Redressal Officer within **14 calendar days** of notification of suspension;

9.5.2 The Insurer shall acknowledge receipt of the appeal within **48 hours** and complete its investigation within **21 calendar days** of receipt;

9.5.3 Where the investigation exonerates the Insured, the withheld Payout shall be released with interest at the applicable bank rate within **5 business days**; and

9.5.4 Unresolved appeals may be escalated to the Insurance Ombudsman in accordance with Clause 12.8.

9.6 Human Review and Override. The Insurer may, at its discretion, direct a human review of any automated fraud determination. A designated authorised officer shall have the power to override a system-generated fraud classification where, on the balance of evidence, such classification is determined to be erroneous.

SECTION 10 — DATA GOVERNANCE AND VERIFICATION

10.1 Authorised Data Sources. The following data sources are designated as authorised inputs to the Parametric Trigger Engine and AI Risk Assessment Engine:

Data Source	Authority	Signals Provided
IMD Weather API	India Meteorological Department	Rainfall intensity, temperature, heatwave declarations
CPCB / OpenAQ	Central Pollution Control Board	PM2.5 AQI, O3, NO2 — air quality indices
NDMA Feed	National Disaster Management Authority	Disaster declarations, curfew notifications, civic alerts
Traffic Data API	Licensed third-party provider	Traffic density, road closures, civic disruption indicators
Geospatial Index	Open-specification system	Geospatial micro-zone indexing and cell identification
Platform API	Delivery Platform (contractual)	Zone operational status, demand-to-supply ratio signals

10.2 Data Retention. All Zone State event data, trigger logs, GPS records, and Payout disbursement records shall be retained for a minimum of five years from the date of the relevant event, subject to applicable data protection regulations.

10.3 Data Privacy. The Insurer shall process the Insured's personal data in compliance with the Digital Personal Data Protection Act, 2023. The Insured's GPS and activity data shall be used solely for coverage determination, fraud detection, and risk pool management.

10.4 Model Governance. The AI Risk Assessment Engine and Fraud Detection System shall be reviewed and updated on a regular basis using verified operational data. All model versions shall be logged and subject to audit. Material changes to model parameters or trigger thresholds shall require prior written approval from the Insurer's risk committee.

10.5 Audit Rights. The IRDAI and any designated regulatory auditor shall have the right to inspect all data source logs, trigger event records, model outputs, and Risk Pool accounts upon reasonable notice.

SECTION 11 — RISK POOL AND FINANCIAL SUSTAINABILITY

11.1 Risk Pool Constitution. All Premiums collected under this Policy shall be credited to the Risk Pool, from which all Payout obligations shall be discharged. The Risk Pool shall be maintained as a segregated fund by the licensed risk carrier and shall be subject to solvency requirements as prescribed by IRDAI.

11.2 Sustainability Margin Components. The Sustainability Margin (M) shall comprise: (a) **M-base** — a fixed pool sustainability margin, actuarially calibrated to maintain the ruin probability of the Risk Pool below one percent over the Policy Period, set within the range of 8% to 12% of expected aggregate loss, subject to periodic actuarial review; and (b) **M-zone-volatility** — a zone-level adjustment that increases proportionally with the historical disruption frequency of the H3 Cell, applied uniformly to all Insureds within a given zone and never selectively to any individual Insured.

11.3 Solvency Calibration. The Risk Pool shall be subject to actuarial review no less frequently than quarterly. The actuary shall assess the Pool's sufficiency under stress scenarios including simultaneous HALTED State events across multiple H3 Cells, and shall recommend Premium adjustments if the ruin probability threshold is at risk of being exceeded.

11.4 Loss Ratio Monitoring. The Insurer shall monitor the aggregate loss ratio of the Risk Pool on a weekly basis. Where the rolling four-week loss ratio exceeds 85%, the Insurer shall initiate a review of Loss Fraction calibration parameters and may adjust the Sustainability Margin prospectively with regulatory notification.

11.5 Reinsurance. The Insurer may arrange excess-of-loss or catastrophe reinsurance to protect the Risk Pool against correlated large-scale HALTED State events. Such reinsurance arrangements shall not affect the Insured's entitlement to Payout.

SECTION 12 — GENERAL CONDITIONS AND REGULATORY COMPLIANCE

12.1 Governing Law and Jurisdiction. This Policy shall be governed by the laws of India. Any dispute arising under or in connection with this Policy shall be subject to the jurisdiction of the courts of India, subject to the applicability of the Insurance Ombudsman scheme as prescribed by IRDAI.

12.2 Regulatory Framework. This Policy is submitted for consideration under the IRDAI Regulatory Sandbox framework as established by the IRDAI (Regulatory Sandbox) Regulations, 2019, as amended. This Policy does not constitute a binding insurance contract until: (a) formal approval has been granted by IRDAI; (b) a licensed non-life insurer has been nominated as risk carrier and has countersigned the Policy; and (c) the Policy Schedule has been issued to the Insured.

12.3 Policy Period. The standard Policy Period shall be two calendar months from the Policy Commencement Date, renewable subject to mutual agreement and regulatory compliance.

12.4 Cancellation. The Insured may cancel this Policy by providing seven days' written notice through the Insurer's digital platform. The Insurer may cancel this Policy on account of fraud, non-payment of Premium, or regulatory direction, with immediate effect upon written notification.

12.5 Dispute Resolution. In the event of a dispute arising under this Policy, the following multi-level resolution process shall apply: (a) **Level 1 — Internal Grievance:** submission to the Insurer's Grievance Redressal Officer within 30 days of the event; (b) **Level 2 — IRDAI Escalation:** referral to the IRDAI Grievance Redressal Cell if unresolved within 15 days of internal submission; and (c) **Level 3 — Insurance Ombudsman:** referral to the Insurance Ombudsman as prescribed by the IRDAI (Insurance Ombudsman) Rules, 2017.

12.6 Amendments. This Policy wording may be amended only with the written agreement of both the Insurer and the Insured, except for adjustments to Premium and Loss Fraction parameters made in accordance with the automatic recalibration provisions of Sections 5 and 11, which shall be notified to the Insured no less than seven days in advance.

12.7 Entire Agreement. This Policy, together with the Policy Schedule and the Schedules appended hereto, constitutes the entire agreement between the Insured and the Insurer with respect to the subject matter hereof and supersedes all prior negotiations, representations, and agreements.

12.8 Grievance Redressal. The Insured may submit grievances to the Insurer's designated Grievance Redressal Officer within 30 days of the event giving rise to the grievance. Unresolved grievances may be escalated to the IRDAI Grievance Redressal Cell or the Insurance Ombudsman.

12.9 Severability. If any provision of this Policy is held to be invalid or unenforceable, such provision shall be severed and the remainder of the Policy shall continue in full force and effect.

12.10 Language. This Policy is issued in English. In the event of translation into any regional language for policyholder communication, the English version shall prevail in case of conflict.

12.11 Insurer's Discretion. Where this Policy grants the Insurer a right to exercise discretion, such discretion shall be exercised reasonably, in good faith, and in a manner consistent with the Insured's reasonable expectations and applicable IRDAI guidelines.
